Software Engineering LAB 1

NAME: Ishanika Vinuthan
SRN: PES2UG24CS911
CLASS: 5B

1. Requirements table

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow a host to send a guest an invitation containing a shareable link with proposed interview time slots.	High	When a host submits a valid guest email and at least one proposed time slot, an invitation email with a booking link is sent within 60 seconds.	Sending the invitation is the entry point for scheduling any guest interview.
FR-002	Functional	The system shall allow a guest to view proposed time slots and confirm one via the booking link, without needing to create an account.	High	When a guest clicks a time slot and selects "Confirm," the slot status changes to "Booked" and both host and guest receive a confirmation email within 60 seconds.	Removing account-creation friction increases the likelihood that guests complete scheduling.
FR-003	Functional	The system shall allow a host to build an episode outline containing ordered sections (e.g., Intro, Guest Bio, Questions, Sponsor Break, Closing).	High	When a host adds a new section with a title, the section appears in the outline list and is saved automatically within 3 seconds.	The outline builder is the core content-preparation feature that differentiates the platform from plain scheduling tools.
FR-004	Functional	The system shall allow a host to reorder outline sections using drag-and-drop.	Medium	When a host drags a section to a new position and releases it, the outline reflects the new order immediately and persists after page refresh.	Hosts frequently restructure an episode's flow while preparing, so reordering must be fast and intuitive.
FR-005	Functional	The system shall allow a host to export the finalized episode outline as a PDF document.	Medium	When a host clicks "Export as PDF," a downloadable PDF containing all outline sections and talking points is generated within 5 seconds.	Hosts need a portable, print-friendly copy of the outline to reference during recording.
NFR-001	Nonfunc.	The system shall sync a confirmed interview time with the host's connected calendar (Google/Outlook) within 5 seconds of guest confirmation.	High	A test booking confirmed by a guest appears as an event on the host's connected calendar within 5 seconds, with correct date, time, and guest name.	Calendar accuracy prevents double-booking and missed interviews for hosts managing multiple podcasts.
NFR-002	Nonfunc.	The system shall send guests a reminder email at least 24 hours before the scheduled interview, with a delivery success rate of at least 99%.	High	A monitoring report over 500 test reminders shows at least 495 (99%) delivered successfully at least 24 hours before the associated interview time.	Reliable reminders reduce guest no-shows, which directly affects recording schedules and production costs.

2. UML Use-Case Diagram

3. Use-case flow document

Primary Actor: Host
Secondary Actors: Guest (confirms availability), Calendar Service (external system, synced automatically once a time is confirmed)
Preconditions: The host is logged in (UC-02 Login) and has the guest's email address on hand.
Trigger: The host wants to book a guest for an upcoming podcast episode.
Main Success Scenario

1. Host navigates to "Schedule New Interview" and enters the guest's name and email address.
2. System prompts the host to select two or more proposed time slots from their availability.
3. Host selects the proposed time slots and clicks "Send Invitation" (UC-03).
4. System emails the guest a booking link listing the proposed time slots.
5. Guest opens the link and selects one available time slot (UC-04 Confirm Availability).

6. System marks the interview as "Confirmed" and includes UC-05 Sync with Calendar to write the event to the host's connected calendar.
7. System sends a confirmation email to both host and guest with the finalized date and time.
8. System creates a blank episode outline shell linked to the confirmed interview, ready for the host to fill in (UC-06).
9. Host is redirected to the new interview's dashboard, showing the confirmed time and a "Build Outline" button.
10. Use case ends successfully.

Alternate Flow

5a. Guest Does Not Respond Within 48 Hours

- 5a1. System automatically triggers UC-08 Send Reminder, emailing the guest a follow-up with the same booking link.
- 5a2. If the guest still has not responded after a second reminder, the system flags the invitation as "Awaiting Response" on the host's dashboard.
- 5a3. Host may resend the invitation with new time slots, cancel it, or continue waiting; the use case returns to step 4 if resent.

6a. Calendar Sync Fails

- 6a1. System displays a "Calendar sync failed" warning to the host but keeps the interview status as "Confirmed."
- 6a2. System retries the calendar sync automatically up to 3 times over the next hour.
- 6a3. If all retries fail, the host is prompted to reconnect their calendar account; the interview remains confirmed in the platform regardless of calendar sync status.

Postconditions: The interview is confirmed with both parties notified, the event appears on the host's calendar (when sync succeeds), and an empty outline is ready for the host to build out.
